

ABSTRACT OF THE DISCLOSURE

A gable top package for pourable food products produced by folding and sealing a sheet packaging material and provided with a gabled top portion including front and back sloping top walls joined together at a top transversal seal, and a pair of side top walls connecting respective lateral edges of the front and back sloping top walls and obtained by folding respective portions of the sheet packaging material along predetermined crease lines delimiting a number of panels. The crease lines are determined among a plurality of possible crease lines designed so as the forming of the side top walls is performed by rotations of the panels as rigid bodies about their respective crease lines.
